## **AMENDMENTS TO THE CLAIMS:**

1. (Currently Amended) A compressible pin assembly comprising:

a barrel with a hollow chamber having a cross section with <u>a</u> first inner <del>dimensions</del> diameter, a closed end, and an open end, the open end forming a crimpable lip with <u>an uncrimped</u> second inner <del>dimensions</del> diameter larger than the first inner <del>dimensions</del> diameter of the hollow chamber\_and, when the lip is crimped radially inwardly, forming <u>a</u> crimped inner <del>dimensions</del> diameter;

a contact pin having a pin body with <u>an</u> outer <u>dimensions</u> <u>diameter</u> smaller than the first inner <u>dimensions</u> <u>diameter</u> of the cross section of the hollow chamber allowing for slidable movement of the pin body within the hollow chamber <u>and having an outer diameter smaller than</u> the uncrimped inner diameter of the crimpable lip so that the pin body can pass through the <u>crimpable lip into the hollow chamber</u>, the outer <u>dimensions</u> <u>diameter</u> being larger than the crimped inner <u>dimensions</u> <u>diameter</u> of the lip preventing movement of the pin body beyond the lip after the lip is crimped, the contact pin further having a contact end extending from the pin body through the lip of the open end of the barrel;

an elastic element contained in the hollow chamber against the closed end of the barrel to spring-bias the pin body of the contact pin against the lip so that the contact element end of the pin body extends beyond the barrel;

an aperture passing through the hollow chamber of the barrel with dimensions a diameter less than the dimensions of the first inner dimensions diameter of the hollow chamber; and a stopper designed to be placed into and to seal the aperture.

- 2. (Orignal) The compressible pin assembly of claim 1 wherein the aperture is located in a circumferential wall of the hollow chamber.
- 3. (Orignal) The compressible pin assembly of claim 1 wherein the aperture is located in the closed end of the hollow chamber.
- 4. (Orignal) The compressible pin assembly of claim 2 wherein the stopper is press fit in the aperture..

- 5. (Canceled).
- 6. (Original) The compressible pin assembly of claim 4 wherein the stopper has a cylindrical outer wall and the aperture has a cylindrical inner wall.
- 7. (Original) The compressible pin assembly of claim 4 wherein the stopper has a semi-conical outer wall and an aperture has a semi-conical inner edge.
- 8. (Original) The compressible pin assembly of claim 3 wherein the stopper and aperture have an I shaped cross section where the aperture is crimped over the stopper.
- 9. (Original) The compressible pin assembly of claim 1 wherein the cross section of the hollow chamber of the barrel is circular.
